Universal Ostrich Farms: Did Anyone Actually Read The Decision? Or Anything Else?

A few days ago, the Federal Court of Canada refused to block the killing of approximately 400 ostriches in British Columbia. Some had tested positive to H5N1, leading to the order. Justice Zinn said the the Canada Food Inspection Agency, or CFIA, was reasonable in the orders that it issued. This had members of the “Freedom Movement” up in arms about it.

However, the real story was far different from what people were being led to believe.

If developers working for Pfizer or Moderna had approached the “Freedom Movement” asking for money, they would have been shunned. And rightfully so. However, when an ostrich farm

working on developing “covid masks” whines about its animals being culled, people rush to their defence.

There are certainly fundraising efforts underway. At the time of writing this, the GoFundMe page has raised nearly \$51,000. And there’s another \$34,000 from GiveSendGo. There are most likely other amounts that are not publicly disclosed.

It seems that there really is no cure for stupidity.

But in fairness, perhaps it’s wrong to be too harsh on supporters when they were never told the full truth to begin with.

Quotes From Justice Zinn’s Decision

[26] From approximately 2020 onward, the Applicant shifted its primary commercial focus to extracting and studying antibodies, notably immunoglobulin Y, from ostrich eggs. For the Applicant, these antibodies have lucrative commercial and research values, especially in the development of diagnostics or therapeutics relevant to human viruses, such as the COVID-19 causing virus of SARS-CoV-2. To advance this antibody-based venture, the Applicant has collaborated with both domestic and international partners, including scientific researchers and private sector entities. Despite this strategic shift, some level of ostrich sales, along with sales or planned sales of products derived from ostrich fat and eggshells, continued through to at least December 2024.

[27] By early December 2024, the farm reportedly housed about 450 ostriches, including older breeding stock and newly introduced birds.

[25] The Applicant has developed what it considers a uniquely large strain of ostriches *through selective breeding since the 1990s*. The ostriches are allegedly selected for body size and favourable genetic traits, with *surplus birds not meeting these standards*

being discarded or culled. Some ostriches currently on the farm trace back to early imports from Africa and remain part of the breeding stock.

[26] From approximately 2020 onward, the Applicant shifted its primary commercial focus to extracting and studying antibodies, notably immunoglobulin Y, from ostrich eggs. For the Applicant, these antibodies have lucrative commercial and research values, especially in the ***development of diagnostics or therapeutics relevant to human viruses, such as the COVID-19 causing virus of SARS-CoV-2.*** To advance this antibody-based venture, the ***Applicant has collaborated with both domestic and international partners, including scientific researchers and private sector entities.*** Despite this strategic shift, some level of ostrich sales, along with sales or planned sales of products derived from ostrich fat and eggshells, continued through to at least December 2024.

[27] By ***early December 2024, the farm reportedly housed about 450 ostriches,*** including older breeding stock and newly introduced birds.

These quotes come directly from Justice Zinn's own ruling. The Applications weren't brought based on some compassionate grounds. Instead, it was to ward off the CFIA's attempts to interfere with the company's economic interests.

And again, it had to do with "fighting Covid".

9. I have also been involved in other studies with the University of British Columbia studying ostriches utilizing a protein mixture to retain ostrich weight through transportation.
10. As with Dave, I have devoted my life to ostriches and in particular to UOF. **If the UOF ostrich herd is culled we will not be able to recover, and this will have an irreversible financial impact on me.**
11. As a director of UOF, I confirm that UOF undertakes to abide by any order the court may make as to damages in the event that CFIA sustains damages as a result of UOF seeking an injunction.

KAREN ESPERSEN

In her own Affidavit, Espersen admitted the real reason she was against having the animals culled. If there were to be, the business — related to Covid testing — would not be able to recover. This is far from what the public had been led to believe.

Karen Espersen
 Co-Owner, Struthio BioScience Inc.

Owner (President)
 Universal Ostrich Farms Inc. • Self-employed
 May 2001 - Present • 24 yrs 1 mo
 Edgewood, B.C.

I have been in the Ostrich Industry for 30 plus years now and work with incubating, hatching, raising of chicks, breeder care and product manufacturing and distribution. Consistently producing top quality products (meat, oil, hides, eggs and feathers) **We are presently producing Neutralizing COVID 19 Antibodies. These amazing antibodies also cover any variants that come along.** We are working hard to find the right company to put these antibodies into a nasal spray. Very Very proud of our work

The screenshot shows the top of a LinkedIn profile for Karen Espersen. The header includes the LinkedIn logo, a search bar, and navigation icons for Home, My Network, Jobs, Messaging (with a red notification bubble showing '5'), and Notifications. Below the header, the profile name 'Karen Espersen' and title 'Co-Owner, Struthio BioScience Inc.' are visible. The main section features a blue square profile picture, the title 'Owner (President)', and the company 'ONU Body Care Inc. - Self-employed'. It also shows the duration 'Jan 2012 - Present · 13 yrs 5 mos' and the location 'Edgewood, B.C.'. A detailed description of the company follows, mentioning specialized skin care products and a university endorsement.

Owner (President)
 ONU Body Care Inc. · Self-employed
 Jan 2012 - Present · 13 yrs 5 mos
 Edgewood, B.C.

ONU Body Care Inc. has specially formulated skin care products high in omega 3-6-9 essential fatty acids to replenish and repair skin cell damage. Our products are great for Eczema, Burns, Age Spots, Anti-Aging, Sunburns, Scars, Stretch Marks, Dry Cracked Feet and all around skin cell replenishment. The University of British Columbia tested our oil to be 50 % higher in omegas than found in literature values and we are doctor endorsed. Our website is www.onubodycare.com . Check us out!

Karen Espersen's [LinkedIn page](#) is open to the public, and it explains exactly what she has been up to. (See [archive](#)).

I have been in the Ostrich Industry for 30 plus years now and work with incubating, hatching, raising of chicks, breeder care and product manufacturing and distribution. Consistently producing top quality products (meat, oil, hides, eggs and feathers) We are ***presently producing Neutralizing COVID 19 Antibodies. These amazing antibodies also cover any variants that come along.*** We are working hard to find the right company to ***put these antibodies into a nasal spray. Very Very proud of our work***

The ostriches on this farm were being used to:

- produce “neutralizing” COVID antibodies
- be used to further variants
- eventually end up as a nasal spray

While the “save the ostriches” rallying cry centered around compassion, it seems that vast majority of the public was unaware of the full truth.

[Very Little Information On Struthio BioScience Inc.](#)

LinkedIn profile of Karen Espersen, Co-Owner of Struthio BioScience Inc. The profile shows a search bar, navigation icons for Home, My Network, Jobs, and Messaging, and a header with the name and title. The main section displays the company name, role, and duration of employment (Apr 2021 - Present, 4 yrs 2 mos, British Columbia, Canada, On-site). A bio statement follows: "I am working with the leaders in the world exclusively creating Natural Antibodies utilizing the amazing immune system of the Ostrich. Our company is a leader in creating curative products! Watch us closely, it is going to be amazing!!"

In addition to running Universal Ostrich Farms and ONU Body Care Inc. (which makes beauty products), Esperson co-owns a company called Struthio BioScience Inc.

There's very little available on the company, but it was registered in Alberta from 2022 until 2024. That space is now occupied by a law firm. Struthio is currently registered in B.C.

37. For example, one ostrich egg is the equivalent of 100 chicken eggs in antibody production, or the blood of 800 rabbits. There is also the added benefit that you do not need to harvest the animal itself to extract the antibodies.
38. Dr. Tsukamoto was very interested in our herd because of the size of the ostriches. However, he was not able to provide us with the antigens for producing the antibodies during Covid due to the lockdowns and travel restrictions.
39. As a result we began working with Bio Solutions Inc. ("Bio Solutions") in Quebec, which was working on protocols to produce antibodies for Covid 19 due to a \$13,000,000 grant from the Government of Canada.
40. In or around 2021 Bio Solutions provided antigens to UOF which then allowed us to produce antibodies using the ostrich eggs.
41. Bio Solutions found that UOF's antibodies were superior to the previous chicken derived antibodies, since they were stronger and more robust. Since the results from the ostrich eggs were showing positive results we decided to commit the entire operation of UOF to antibody production.
42. Then, in about 2022 UOF began a venture with Struthio Bio Science Inc ("Struthio") and entered into a contract wherein UOF must provide Struthio with ostrich eggs, failing which UOF would be in breach of the contract.

In his own Affidavit, Bilinski talks about the contract with a Quebec company, Bio Solutions Inc. Now we see what's really going on. These people are asking the public to subsidize a legal challenge that (if successful) allow them to complete the \$13,000,000 agreement.

B.C. ostrich farm developing antibodies that could put an end to coronavirus

'This is going to be a game changer'

Darren Handschuh / Castanet
Aug 12, 2021 10:24 AM

"Working with a lab back east, we inoculated our hens with the dead COVID-19 virus. The hen produces antibodies in two weeks and two weeks after that she puts them into her eggs," says Espersen, adding that is one of the reasons they were so hesitant to abandon their 500 birds.

*“This is a very natural process and last year we were able to **block 99.9 per cent of the coronavirus if it was infused in a face mask.**”*

For various reasons, the face mask was never mass produced, but a different company began testing and they discovered the birds could be the key to neutralizing COVID-19 completely.

“We were so excited about being able to help the world we dedicated all of our laying hens on the farm to this program,” says Espersen, adding ostriches can produce an egg every two days for several months in a row.

*“We inoculated all of our hens and this summer they have been **producing antibodies that can neutralize the COVID-19 virus.**”*

Bilinski says the antibodies are extracted from the egg yolks, with a single ostrich egg being equivalent to 24 chicken eggs.

*“This last week, we got word from the lab the antibodies are **neutralizing the Delta (variant),**” says Bilinski.*

*Espersen says they are now taking the next step and are working with a company out of Vancouver to **create a nasal spray** that could be administered to anyone with COVID.*

Vancouver Is Awesome covered the farm back in the Summer of 2021, nearly 4 years ago. Bilinski and Espersen were open about the Covid testing that was going on. This included the production of a mask that would “glow” when exposed to Covid. There were also ambitions about the eventual creation of a nasal spray.

“Covid Mask” From Ostrich Extracts A Real Concept

This ostrich farm isn't the only organization who has thought about creating a virus detection system made from the birds' antibodies. The idea has been around for several years now. The World Economic Forum had a similar vision as well.

Liberty Talk Does No Research Whatsoever On Story.

Liberty Talk hosted an interview about the ostriches, but apparently never did any fact checking ahead of time. It's a bit embarrassing to "cover" a story, but not have a clue about what's really going on. Then again, she shilled hard for Action4Canada.

As an aside, Connie Shields appears to be livid with some of the questions that skeptics are asking. This article comes across as downright unhinged.

There are all kinds of questions that still need answering:

- What else have these birds been infected/poisoned with?
- What other testing is on the agenda?
- Who else has been involved in running this project?
- What is the ultimate goal(s) of these experiments?
- Are there any other subsidies taxpayers have had to fund?

*****Note: a thank you to David Dickson, for giving a nudge in the right direction. It's nice that there are people who will ask those tough questions.**

Hi, Canuck Law, What is your position on this or the purpose of your article? That OMG, the ostrich farm owners may have not disclosed the whole truth vs an illegitimate government that has never met a self benefitting crime it doesn't like?

The Justice also said in his ruling, that you don't mention, that he would not listen to any new evidence that has been found since the ruling by the CFIA in December of 2024. Seems the decision was decided upon before the court case.

David Dickson

MAY 20, 2025 AT 6:16 PM

If you understand the law and read the decision he considered WHY!.
THIS WASN'T AN APPEAL.

Crazy!

Grace

MAY 20, 2025 AT 9:12 AM

Thank you for this breakdown... proves again never to believe the first 'version' of any mainstream story you hear.

The birds are innocent and should not be culled just because the humans involved in their lives may be evil pharmaceutical shills, BUT it must be fully determined and disclosed as to what else they were injected with.

All COVID-related pathogens are man-made, even though gain-of-function research was supposed to be prohibited or at least very strictly monitored and regulated.

I hope you stay on this story because we are likely to find it is part of the Pfizer/Moderna/J&J crimes against humanity...just another ploy to trick people into believing they are in danger of a non-existent pathogen and need another 'vaccine' ... and that a nasal spray will be the perfect answer for those who hate needles.

A nasal spray can be used to 'vaccinate' those who do not consent and saves billions in needles and other vaccination hardware, as well as staff. They can spray the stuff from the air...

Amber Gibson

MAY 21, 2025 AT 6:12 PM

Sooo I've been down the rabbit hole deep with this one for weeks!! If my summation is correct the order to cull is really reflective of why all these birds . animal have been injected with for scientific study and also because they have been used for other commodities IE: oils dog bites..face creams etc and there's really no clue as to the purity of the product or what kind of

injection the product carries?? Last question..how is this falling and food sustainability if they aren't used as a food source?? I felt for the beginning something bigger was at play!! But IDK!!
